LibraVIEW

It works in conjunction with LibraCELLs, LibraBASIC and LibraPRO controllers. The software enables users to get a live readout of weights placed on LibraCELLs, as well as offering logging and archiving facilities. These are available in KG or LBS.

The LibraVIEW software allows all activity to be logged and exported to a Comma Separated Value (.csv) file which can be opened by any text or spreadsheet application. It is also possible to automate this process to archive logs.

When used in conjunction with a LibraPRO controller, relays can be triggered when an underload or overload is detected by the LibraCELLs. These relays can be programmed to trigger sounders or visual warnings as well as triggering an emergency stop.

Software Features

Works with USB and/or Ethernet interfaces
View individual loads or group loads
Set Overload and Underload warnings and alarms
View data as figures or graphs
Full data logging capabilities

Minimum System Requirements

Windows XP, Vista or 7
1 x USB or 1 x Ethernet Ports
1024 x 768 minimum resolution
